//decage containing the following tissue(s): Chondrosarcoma cell
//denon and Soares, Genome Research, 6:791-806, 1996.
//first strand cDNA synthesis was primed with an oligo-dr
primer containing a Not I site. Double stranded cDNA was
ligated to an EcoR I adaptor, digested with Not I, and
//decage directionally into pr773-pac vector. The
//district containing allowed the synthesis of
first-strand cDNA contains a library tag sequence that is
located between the Not I site and the (dr)18 tail. The
//decage contains a library is GCTCAAGGCT.

Following HAP purification, this DNA was used as tracer in a subtractive hypridization reaction. The diriver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1322376-1323911, 1456007-1456775, and Fastima Ronald.

/note="Organ: Lung; Vector: pT773-pec (Pharmacia) with a modified polylinker; Site_1: ECOR I; Site_2: Not I; NCI_CGAP_DIO is a cDNA library containing the following tissue(s): A pool of Lung Focal Fibrosis. The library was constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dr primer containing a Not I site. Double stranded cDNA was ligated to an ECOR adaptor, digested with Not I, and cloned directionally into PT73-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the Name of the contains and the Name of the contains and the labrary is

The sequence contained an oligo-dT track that was present in the
oligonucleotide that was used to prime the synthesis of first
strand cDNA and therefore this may represent a bonafide poly A
tail. cDNA Library Preparation: M.B. Soares Lab Clone distribution:

is a subtracted library derived from NoI_CGAP_Sub5
NoI_CGAP_Sub8 library derived from NoI_CGAP_Sub5
NoI_CGAP_Sub8 library had 2.5 million recombinants. A
single-stranded DNA preparation of NoI_CGAP_Sub5 was used
as a tracer in a subtractive hybridization with a driver
comprising; a pool of clones from NoI_CGAP_Sub5 (IMAGE
clone Ids 273283-2737415, 3068040-3069191; 25% of the
driver population), a pool of clones from NOI_CGAP_Sub4
(IMAGE clone Ids 2723592-2729326; 25% of the driver
population), NOI_CGAP_Sub6 (pool AIF-AJU, IMAGE Ids
2728569-2733190; 25% of the driver population), and
NOI_CGAP_Sub7 (IMAGE Ids 3069192-3072238, 308164-3084550
; 25% of the driver population). Subtraction was
performed as previously described [Bonaldo, Lennon &
Soares (1996): Normalization and Subtraction: Two
Approaches To Facilitate Gene Discovery, Genome Research
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        EST 06-FEB-2001

Another Torgan: pooled, Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NI_CGAP_GCB1) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239,

/note="Corgan: lung; Vector: pT/T3D-Pac (Pharmacia) with a modified poly1inker; Plasmid DNA from the normalized library NCI_CGAP_Lu5 was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 clones made from the same library (cloneIDs 1414920-1417991 and 1520904-1522439). Subtraction by Bento Soares and M. Fatima Bonaldo. "

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Anote—"Organ: lung; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker: Plasmid DNA from the normalized library NCI_CGAP_Lub was prepared, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from a pool of 5,000 rolones made from the same library (cloneIDs 1414920-1417991 and 1520904-1522439). Subtraction by Bento
